

READY TO APPLY — YOUR PIMSY TRAINING

Ready to Apply

Customer guide to getting the most from PIMSY training

How PIMSY Training Works

We teach the tool. You decide how to use it.

Your PIMSY Specialist is your feature expert

They'll teach you exactly how every applicable feature works — what it does, how to use it correctly, and what your options are.

Your team are the experts in how you operate

You decide how each feature maps to your clinical and administrative workflows. That's a decision only your organization can make.

Training is where those two things come together

You leave every training knowing how to use what was covered — independently, without help. What you do with that knowledge is yours to determine.

What Your Specialist Does vs. What Your Team Owns

YOUR SPECIALIST WILL:	YOUR TEAM IS RESPONSIBLE FOR:
Teach every feature completely — purpose, usage, and common mistakes	Deciding how each feature maps to your workflows and operations
Walk you through each step and confirm your team can do it independently	Bringing the right people — subject-matter experts & decision makers — to trainings & touchpoints
Answer feature questions thoroughly and clearly	Completing post-training practice (homework) so training converts to real proficiency
Briefly address workflow questions, then redirect to the feature	Arriving at End-User trainings with workflow decisions made — Core trainings are not the place to make them
Provide recordings and assign practice tasks after every session	Making workflow determinations & answering workflow questions from your end users

4 Things That Make Your Implementation Successful

1

BRING THE RIGHT PEOPLE

Subject-matter experts on each training & decision-makers in the room for configuration and workflow decisions.

2

OWN YOUR WORKFLOW DECISIONS

Your Specialist shows you how PIMSY works. Your team decides how it will work best for you. Come prepared to make those calls.

3

COMPLETE BETWEEN-SESSION PRACTICE

Every training ends with assigned practice tasks. Completing them is what converts training into real proficiency. Come ready.

4

ARRIVE AT GO-LIVE READY

By Go-Live, your team should know how to use every feature — and your workflows should already be decided. Training is for learning the tool, not designing your processes.
